

5 SIGNS YOUR HOME HAS MOLD

Mold contamination can seriously damage a policyholder's property and belongings. Mold can cause significant stress when the source of the odor, discoloration or possible health concern isn't immediately obvious. Here are 5 signs that their home has mold.

1. You notice a musty or damp smell.

If you notice that your home has a musty smell, it may indicate there is a mold issue in your house.

2. You know there is a history of flooding in your home.

Past flooding can lead to mold issues later on as well. It has short-term and long-term effects on the home. Check previously flooded areas for mold.

3. You notice paint bubbling on your walls or near a window.

A common reason for paint to bubble is the presence of moisture. Moisture often leads to mold problems. Find the source of the moisture before mold develops.

4. You feel like you have lingering cold/flu like symptoms.

If you are dealing with symptoms you cannot pinpoint, it could be that you are dealing with mold. Leave for a few days and if your symptoms return once you are home, it could be something more than a cold or virus.

5. You visibly see mold spores.

The most obvious way to determine that you have mold present is if you can see it. If you have visible mold, it can be an indicator that you have a big problem. Contact a mold remediation company immediately.
